**Proponent name, location:** Ciba Specialty Chemicals (contact: John Deming, ((202) 857-5200)

**Other bills on product (108<sup>th</sup> Congress only):** None.

**Nature of bill:** Temporary suspension of duty through until December 31, 2007.

**Retroactive effect:** None.

**Suggested article description(s) for enactment (including appropriate HTS subheading(s)):**

**Check one:**  Same as that in bill as introduced  
 Different from that in bill as introduced (explain differences in Technical comments section)

**Product information, including uses/applications and source(s) of imports:**

The subject chemical is used as an intermediate in the manufacture of azo class dyes such as Vat orange 7 and Vat red 14. The proponent uses the product in the manufacture of light stabilizers for polymers. The chemical is also used in the production of agricultural chemicals, rubber processing chemicals, and water treatment products; it is imported from France, India, the United Kingdom, Germany, Japan and possibly from China.

The last domestic manufacturer of *o*-nitroaniline appears to have been the W.G. Krummrich plant of Monsanto Co., located in Sauget, IL. In 1997, Monsanto reorganized to concentrate on biotechnology and agricultural products, spinning off its other chemical businesses, including the Krummrich facility into Solutia, Inc. Solutia entered Chapter 11 bankruptcy protection on December 17, 2003, reportedly because of the allocation of debt and liabilities at the time of the Monsanto spin-off.<sup>3</sup> Solutia's Krummrich
